With this software, you can personalize your website in two ways (unlike some other personalization scripts). Here's how they work: 1st Method: Personalize Through Email You can use this method to boost up the response from your email campaigns, if you have an ezine or newsletter or even an autoresponder series. Suppose you are send an email to your list about your new book on 'How to Make a Million In a Year'. Normally you would just send them a link that looks like:

HowToMakeAMillionInAYear.com/new-book.htm But now, you send them a 'personalized-link' which looks like this: HowToMakeAMillionInAYear.com/new-book.htm?Stephen And when the visitor clicks on the link, he is taken to a page which is personalized with his name. A page that says, "Hi Joe, How are you doing today?" instead of "Dear Fellow Internet Marketers" or something like that... How do you do this? Just put the 'personalization code' of your autoresponder or ezine manager at the end of the URL after a question mark. Different autoresponders and scripts use different codes, like or or of whatever.

Just put that at the end of the URL after a question mark. So your url should look something like:

YourSiteName.com/? (or) YourSiteName.com/? OR YourSiteName.com/somepage.htm? (or)

YourSiteName.com/somepage.htm? Its Completely Error Safe... And the most important part is, it is completely error safe. Which means, if there's some problem with your autoresponder or ezine, and you get emails that read like: Hi The script will automatically detect it, and redirect the visitor to another non-personalized page. That way, it appears completely normal to them, and instead of making more sales, you don't end up losing them... 2nd Method: Directly Ask The Visitor's Name on the Website You can also add another piece of code to directly ask for the user's name on any webpage. Here's how that works... When a visitor visits your website, he gets a prompt message, asking him his name. When he enters his name, it automatically gets personalized with his name.
