

Advanced Scientific Computing In Basic With Applications In Chemistry, Biology And Pharmacology. Data Handling In Science And Technology, Volume 4.

[DOWNLOAD HERE](#)

This book gives a practical introduction to numerical methods and presents BASIC subroutines for real-life computations in the areas of chemistry, biology, and pharmacology. The choice of BASIC as the programming language is motivated by its simplicity, its availability on all personal computers and by its power in data acquisition. While most of the scientific packages currently available in BASIC date back to the period of limited memory and speed, the subroutines presented here can handle a broad range of realistic problems with the power and sophistication needed by professionals and with simple, step-by-step instructions for students and beginners. A diskette containing the 37 program modules and 39 sample programs listed in the book is available separately. The main task considered in the book is that of extracting useful information from measurements via modelling, simulation, and statistical data evaluations. Efficient and robust numerical methods have been chosen to solve related problems in numerical algebra, nonlinear equations and optimization, parameter estimation, signal processing, and differential equations. EAN/ISBN : 9780080868318 Publisher(s): Elsevier Science & Technology Format: ePub/PDF Author(s): Valko, Steven P. - Vajda
