Computational Science And High Performance Computing Iv

[DOWNLOAD HERE](#)

Adaptive Modelling of Two-Dimensional Shallow Water Flows with Wetting And Drying.- HPC Processor Technologies and Their Impact on Simulation.- A Parallel Implementation of FEM for a Boundary Value Problem for the Shallow Water Equations.- Parallel FVTD for Solving Maxwell Equations in Dielectric-Metal Composite Media.- Numerical Modeling of Work of Pulse Aerosol System of Fire Fighting on Computer Clusters.- Stagnant Vortex Flow.- Numerical Modelling of surfaceWaterWaves Arising Due to Movement of Underwater Landslide on Irregular Bottom Slope.- Simulation of Geophysical Problems with DUNE-FEM..- On Modeling of Mechanical Properties of Fibrous Composites.- Well-Balanced Path-Consistent Finite Volume EG Schemes for the Two-Layer Shallow Water Equations.- Some Features of the Landslide Mechanism of Surface Waves Generation in Real Basins.- Multiscale Analyses for the Shallow Water Equations.- Shallow Water Equations for Shear Flows.- A Language for the Definition of Fortran Source to Source Transformations.-Tsunami Modelling With Unstructured Grids. Interaction Between Tides and Tsunami Waves.- A Geometry Independent Slope Limiter for the Discontinuous Galerkin Method.- Two-Fluid Barotropic Models for Powder-Snow Avalanche Flows.- Hierarchy Analysis and Reduction of Reacting Flow Systems.- Two-Dimensional Nonstationary Mathematical Model of Water Catchment.- Central-Upwind Schemes for Boussinesq Paradigm Equations.- Parallel Lattice-Boltzmann Simulation of Transitional Flow on Non-Uniform Grids.- Combined Approach to Numerical Simulation of Spatial Nonlinear Waves in Shallow Water with Various Bottom Topography.- Algorithm for Solving Non-Stationary Three-Dimensional Navier-Stokes Equations with Large Reynolds Numbers on Multiprocessor Systems.- Numerical Modeling of Non-Homogeneous Turbulence on Cluster Computing System.- Dynamic Finite Element Analysis of Cancellous Bone Micro Structure.- Three-dimensional Numerical Modeling of Stratified Flows in Littoral Zone of Israel Using Shallow Water Approximation.- A Cartesian Cut-Cell Solver For Compressible Flows. EAN/ISBN : 9783642177705 Publisher(s): Springer, Berlin Discussed keywords: High-Performance-Computing (HPC) Format: ePub/PDF Author(s): Krause, Egon - Shokin, Yurii - Resch, Michael M. - Krner, Dietmar B. -

Shokina, Nina
